

WEBSITE STRATEGY / 01

How a contractor buys from you, and where you **lose him.**

Seven steps, from the moment a crew runs out of liner to the moment they order again. One page to read it, one page to see what the new site changes.

01 The seven steps

This is the path a lining contractor already walks, whether or not your website helps him. The red step is the one that decides the sale.

Steps 1 to 2	Steps 3 to 4	Steps 5 to 6	Step 7
Discover	Evaluate	Buy	Keep
He realises he needs something.	He checks whether you have it.	He asks the price and orders.	He comes back.

01

Need arises DISCOVER

"I have a job booked and I am short on liner."

WHAT HE DOES

Checks what is left on the truck and starts looking for a supplier.

02

Search DISCOVER

"Who sells this, and who actually has it in stock?"

WHAT HE DOES

Types the product name into Google, or asks another contractor who they use.

03

Lands on your site EVALUATE

"Do they carry my size? And do they install pipe themselves?"

WHAT HE DOES

Scans the home page for roughly five seconds and decides whether to stay.

04

Checks the details EVALUATE

"Will this fit my equipment, and where are the specs?"

WHAT HE DOES

Opens product pages, looks for spec sheets and safety data, compares options.

05

Asks the price THE STEP THAT DECIDES IT

"What does it cost, and can I have it this week?"

WHAT HE DOES

Calls you, or sends a quote request with sizes, quantities and the job.

06

Orders and collects BUY

"When will it get here?"

WHAT HE DOES

Places the order, then picks it up at will call or waits on the freight.

07

Comes back KEEP

"Who do I call when something goes wrong?"

WHAT HE DOES

Rings for support, books a demo or training, reorders from what he bought last time.

02 What the new site does at each step

The same seven steps, with the job the website is doing at each one.

01	Need arises	THE SITE Looks like the established company you are, so yours is the name he remembers when the liner runs out.
02	Search	THE SITE Every product sits on its own page with its real name, so when he searches that name Google shows you and not a competitor.
03	Lands on your site	THE SITE Says "we supply contractors, we do not perform installations" three times before he scrolls. A pipe size picker answers "do you carry my size" in a single tap.
04	Checks the details	THE SITE Spec sheets, safety data and manuals attached to the product they belong to, so a crew in a crawlspace can find the cure schedule on a phone.
05	Asks the price	THE SITE A short request asking only name, company and phone number, with your phone number on every single screen so he can skip the form entirely.
06	Orders and collects	THE SITE Clear pickup and freight information, and the structure to switch on online ordering later without paying to rebuild the site.
07	Comes back	THE SITE Training and demo dates, named support contacts, and a question box that answers the common ones outside office hours.

THE ONE THING TO TAKE FROM THIS

You are losing contractors at step three.

Your current site reads as though you install pipe yourselves. A contractor who believes you compete with him leaves before he ever reaches step four, and you never hear from him, so it never shows up as a lost sale. Correcting that single impression is the largest change in the new design, and it costs nothing to make.

03 Who we built this around

BUYER ONE

Mike

Runs a small lining crew. Buys the same consumables most weeks. Wants supply and support quickly, and will phone before he fills in anything.

BUYER TWO

Dave

New to CIPP and building the division. Wants a clear place to start, someone to spec the first system, and training he can send a crew to.

04 What we need from you

Four things, and we can move the homepage from concept to build.

01 Tell us what you like, and what you do not

Blunt is genuinely more useful than polite. Nothing on the page is final.

02 Confirm your address and opening hours

We have assumed Puyallup, Washington, Monday to Friday, 7:00 to 4:30 Pacific.

03 Send your product list and spec sheets

In whatever format you already keep them. The part numbers, stock levels and prices on the page today are stand-ins.

04 Confirm we can use the manufacturer logos

Without written permission we will keep MaxLiner, Apex and the rest as plain text.
